## DETAILED ACTION

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Crystal Wilson on February 20, 2008.

The application has been amended as follows:

#### In the Specification:

1) In the brief description of drawings in the specification (on page 10), replaced the paragraph describing Figure 10 with the following:

Fig. 10 (a) shows a horizontal formation method.

Fig. 10 (b) shows a horizontal formation method using hydraulic pressure.

2) In the brief description of drawings in the specification (on page 11), replaced the paragraph describing Figure 14 with the following:

Fig. 14 (a) illustrates a trace of the current in case where the aqueous solution includes 100 mM KCl and  $10^{-9}$  M CaCl<sub>2</sub>.

Fig. 14 (b) illustrates a trace of the current in case where the aqueous solution includes 100 mM KCl and 1 mM CaCl<sub>2</sub>.

## REASONS FOR ALLOWANCE

2. Claims 1 and 3-20 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Claims 1, 3, 13 and 15-18 are allowable because the inclusion of "a negative pressure generation means for dropping an internal pressure of the lower solution chamber" so as to cause the artificial lipid bilayer membrane formed on the membrane formation opening of the upper solution chamber to swell to a side of the lower solution chamber so as to cause the membrane to be thinner and come into contact with the support layer, and in the combination as claimed.

Claims 4-12, 14 and 19-20 are allowable because none of the prior art discloses a current measuring device, which is capable of measuring a current flowing via an artificial lipid bilayer membrane, comprising an interval keeping member capable of changing an interval between the upper solution chamber and the bottom plate, and the change of the interval causes the artificial lipid bilayer membrane formed on the membrane formation opening of the upper solution chamber to swell to the side of the lower solution chamber so as to make the artificial lipid bilayer to be thinner and to come into contact with the support layer, and in the combination as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Amy He whose telephone number is (571) 272-2230. The examiner can normally be reached on 8:30am-5pm.
